

DIGITAL DATA: DOCUMENTATION

ENVIRONMENT CANTERBURY

WAIMAKARIRI RIVER

VOLUME 210013702NOB

Summary Data Description

Airborne laser scanning was captured over Christchurch and the adjoining Waimakariri River between 06th to 9th of July 2003. The data contained within this volume relates to the Waimakariri River area only.

1. PROJECT REPORT

Acquisition: Airborne Laser Scanning (ALS) data was acquired from a fixed wing aircraft between 6th to 9th July 2003. Delays in acquiring the data were due to low cloud over the project area.

Ground Support: GPS base station support was provided by the client without incident. The ground check points acquired by the client allowed an assessment of the accuracy of the ALS data.

Data Processing: Reduction of the ALS data proceeded without any significant problems. Laser strikes were classified into ground and non-ground points using a single algorithm across the project area. Manual checking and editing of the data classification against low-resolution intensity imagery created by AAM further improved the quality of the terrain model.

Further Processing: A local geoid model was created covering the C.C.C and Waimakariri River project areas. The geoid separation between the ellipsoidal and local orthometric heights supplied was computed with a resulting N value. The geoid model was then derived using the N value separation and compared to the International geoid model EGM96 as used by the Concord Conversion program. The EGM96 geoid model is a generalised geoid model with minor variations existing with local project areas. Graphics indicated the EGM96 model with a gentle north/south slope. This was expected, as EGM96 is an estimated geoid model with long wavelength corrections. The local geoid is similar, with what appears to be a ridgeline running in a northeast to southwest direction. The outer extents of the geoid model were then extrapolated to cover the project area. The geoid model has been supplied as a dxf file. All data supplied within this volume has been adjusted to the AAMHatch geoid model.

AAM Local Geoid Model
0.05m Contours

The intensity value attributed each xyz laser point was used to derive a low resolution grey scaled image of the project area. Intensity data was also supplied in digital form being xyzi.

The tile layout has been supplied in dxf format.

Data Presentation: The data provided on this volume has been supplied in accordance with a specification agreed with the primary client. Subsequent users experiencing difficulties in handling the data should please contact AAMHatch to arrange a more appropriate data presentation

Further Issues: There are no further issues to report.

2. DATA INSTALLATION

Data format : Space delimited ASCII
 Number & type of media : 2 by 4.7GB DVD
 Media format : CD-ROM format
 Number of files in dataset : 1854 files and 1 readme.pdf
 Data formatted on : 01.12.2003
 Disk volume : 210013702NOB
 AAMHatch Job Managers : Mr. D. Jonas 07 3891 1033
 Mr. B. O'Hagan 07 3891 1033

README FILE

This document (README.PDF) is provided as an Acrobat file in this volume.

To open the file, double click on the PDF file to activate Acrobat Reader Software.

Adobe Acrobat Reader may be downloaded from:

<http://www.adobe.com/products/acrobat/readstep2.html>

REVISION HISTORY

Volumes previously issued under this project include:

Volume	Date	Data Title	Contents
81021501nob	18.08.03	Waimakariri River	Thinned ground points

FILE SIZES AND NAMES

Data is provided in tiles 2km by 2km to the following file naming convention:

eg. Waimak012.grd Waimak - Waimakariri River
 012 - tile sheet layout reference number
 .grd - laser returns , classified as "ground"
 .non - laser returns , classified as "non-ground"
 .thn - thinned ground laser returns
 .int - all laser returns including intensity in x,y,z,i format
 .ecw - greyscaled image

A list of the files contained on this volume is provided in Section 7.

SAMPLE LISTING

ASCII Data			Intensity ASCII Data			
E	N	Ht	E	N	Ht	Int
2482846.460	5755001.960	3.720	2482846.460	5755001.960	3.720	131.0

3. ADDITIONAL SERVICES

AAMHatch can perform the following additional services on the data contained on this volume if required:

- Change horizontal datum : to NZTM or other local grid
- Improve data classification : by tailoring parameters to suit regional variations
- Further classification : Assist building identification by further classifying non-ground strikes
- Data subset : by dividing the data into different tiles or polygons
- Data presentation : by creating contours, profiles, perspectives, flythroughs, colour-coded height plots etc.
- Data gridding : to convert the measured spot heights into a regular grids

4. METADATA

DATA CHARACTERISTICS

Characteristic	Description
Format	Space delimited ASCII
Size	45 million ground data points (approximate) 25 million non-ground data points (approximate) 14 million thinned ground data points (approximate) 70 million intensity data points (approximate)
Captured terrain model	1.3m average point separation
Supplied terrain model	1.8m estimated point density, separated into ground & non-ground
Data thinning	Points not contributing to the terrain definition within 0.13m removed
Laser Intensity	Supplied on all returns
Laser footprint size	0.220m (0.2mrad)
Video	Captured over the project area (not supplied)
Further details	Geoid report methodology, emailed to John Walter on the 09/10/03 File name: geoid_report.pdf

REFERENCE SYSTEMS

SOURCE DATA

	Source	Description	Ref No	Date
Laser scanning	AAM GeoScan	25,000 Hz	810215	6 th – 9 th July 2003
GPS base data	C.C.C.	Static GPS	810215	6 th – 9 th July 2003
Base Stn coords	C.C.C.	Unknown	810215	6 th – 9 th July 2003
Test points	C.C.C.	Unknown	810215	unknown
Geiod Model	C.C.C.	Unknown	810215	unknown

ACCURACY

	Measured Point	Derived Point	Basis of Estimation
Vertical data		0.07 0.15 0.14	Comparison with 155 test pts Deductive estimate Comparison with 25 pts used in geoid model calculations. This is a measure of system noise across the entire project site based on different flight runs and computed gps trajectories
Horizontal data	< 0.55		System specifications ($1/2000$ flying height)

ACCURACY NOTES:

- Values shown represent standard error (68% confidence level or 1 sigma), in metres
- “Derived points” are those interpolated from a terrain model.
- “Measured points” are those observed directly.

USE OF DATA

- Council planning and analysis

LIMITATIONS OF DATA

- The definition of the ground under trees and dense vegetation may be less accurate.
- The definition of the ground in steep heavily vegetated areas may be less accurate.

5. CONDITIONS OF SUPPLY

The data in this volume has been commissioned by **ENVIRONMENT CANTERBURY**.

The data in this volume is provided to **ENVIRONMENT CANTERBURY** under a license by which the data is not sold, lent or distributed to any other party; and used only for the project for which provided, subject to the following conditions:

1. This file (README.PDF) is always stored with the unaltered data contained in this volume.
2. The data is not altered in any way without the approval of AAMHatch. The data may be copied from this file to another.
3. The data is not used for purposes beyond that intended.

Any responsibility of AAMHatch is removed if any of these conditions is not observed.

4. AAMHatch maintains an archive copy of the data in this volume together with this README file for at least 7 years after delivery.

Any problems associated with the information in the data files contained in this volume should be reported to:

AAMHatch
