GNS Science Report 2014/18 May 2014

The following report is an update of the median water table elevation report for Christchurch and surrounding areas released in March 2013 (GNS Report 2013/01). The revision encompasses an extension of the period of groundwater monitoring (4 September 2010 to 30 November 2013) and new surfaces for improved definition of water table fluctuation.

There is a tide gate between monitoring points SBL and SBK. The tide gate only releases water from Styx during the lower part of the tide cycle, resulting in a lower median river level on the upstream side of the tide gate at SBK
